

Reflections of Clarence M. Eidt, Jr.

It has been said that “the trouble with our time is that the future is not what it used to be.” While the notion of trouble may be debated, there can be no doubt that the future for the engineering profession is not going to be the same. The list of technological and social developments impacting our profession today seems endless...ranging from alternative

While recognition of the importance of our technical and economic input to societal decisions is growing, our counsel regarding human values is less avidly sought. Engineering has, however, much to offer in the latter area as well. For
