PAGES (Past Global Changes) Ocean2K Data Compilation Project. The Ocean2K group built a database of marine-based reconstructions for the past 2000 years that passed quality control, which I was involved in. Paleoceanographic records were compiled from high-resolution archives, mostly sediment cores and corals. This database has and will be used to analyze the sea surface conditions and marine climate of the last two millennia and to produce a reconstruction for publication and the next IPCC report. Database is available to the general public at <http://www.pages-igbp.org/workinggroups/ocean2k/metadatabase>
